PROFESSIONAL SUMMARY

A results-driven AI Engineer with a strong foundation in Machine Learning, Natural Language Processing (NLP), and Agentic Workflow based automations. Specializes in building scalable, transformer-based applications, autonomous LLM agents, and robust end-to-end cloud systems. Acts as an effective liaison between IT and business stakeholders, translating complex requirements into scalable implementations. Passionate about bridging the gap between raw data and business impact through agentic AI, NLP pipelines, and multi-tiered cloud infrastructure on Google Cloud Platform (GCP).

TECHNICAL SKILLS

- Machine Learning & AI:** Deep Learning, Vector Databases, LangChain, LangGraph NLP, TensorFlow, PyTorch, Hugging Face, Transformers, LLMs, RAG, Multi-Agent Systems, Computer Vision.
- Cloud & MLOps:** Google Cloud (GCP), Vertex AI, BigQuery, Cloud Run, Agent Engine, MCP Servers.
- Languages & Databases:** Python, C / C++, SQL / MySQL, DBMS.
- Web Development:** React.js, Node.js, FastAPI, JavaScript, RESTful APIs.

EXPERIENCE

Machine Learning Engineer

Oct 2025 – Present

Quantiphi Analytics

Mumbai, India

- Developed a multi-agent solution for an American travel corporation to automate customer segmentation. Built an ADK agent that generates and passes SQL queries to a Python script, executing dynamically on BigQuery.
- Engineered an agent for a Telecom Giant in Indonesia to facilitate user recharges and profile inquiries by interacting with APIs via an MCP server. Implemented a RAG architecture to process and retrieve general platform documentation.

Technical Business Analyst

Oct 2024 – Oct 2025

Quantiphi Analytics

Mumbai, India

- Delivered comprehensive technical presentations and demonstrations to enterprise clients, focusing heavily on Google Cloud Platform (GCP) services and tools.
- Developed technical demos and Proof of Concepts (POCs) mapping complex client requirements to robust GCP architectural solutions.

Research & ML Intern

Jan 2024 – May 2024

Sardar Vallabhbhai National Institute of Technology (NIT Surat)

Surat, India

- Engineered a platform for real-time sentiment analysis using both video and audio feeds.
- Trained and deployed a CNN-based model to detect human facial expressions on live camera feeds, rendering bounding boxes with emotion labels.
- Developed an interactive web-app UI to process recorded media and stream real-time sentiment analysis using Python, OpenCV, and TensorFlow.

PROJECTS

OmniQuant

Python, FastAPI, Groq (LLaMA-3), NumPy, SciPy

- Engineered a full-stack quantitative analysis platform, integrating a FastAPI backend with Groq's ultra-low latency inference engine to deliver real-time, AI-driven trading strategies based on technical oscillators (RSI, MACD).
- Architected a robust risk-modeling pipeline utilizing stochastic Monte Carlo simulations to forecast equity portfolio trajectories across thousands of random market scenarios, accurately quantifying 95% Value at Risk (VaR).
- Implemented the Black-Scholes differential equation to model European derivative pricing, programmatically calculating theoretical fair value and risk sensitivities (The Greeks) alongside dynamic P&L payoff visualizations.

Sahabat Agent

GCP Vertex AI, Python, LiteLLM, MCP Server

- An AI-driven agent configured with a Vertex AI RAG engine for a major Indonesian telecom operator.
- Assists users with account management and mobile plan recharges via an independent MCP Server deployed on Cloud Run.
- Benchmarked 7+ LLMs via LiteLLM framework.

Segmentation Bot & Vertex AI Search

Google ADK, BigQuery, Cloud Run, Looker

- A multi-agent system to dynamically generate customized database views from a client's BigQuery master table.
- Parsed natural language into executable SQL, deployed backend routing via Cloud Run and Cloud Function Frameworks, and visualized in Looker.

Finance QnA Bot

Langchain, Gemini, Transformers, Selenium

- A Financial Q&A Chatbot leveraging Selenium for real-time web scraping of financial statements.
- Implemented a robust RAG system using Langchain and multiple LLMs (Flan-T5, Gemini 1.5 Flash, Gemini 2.5 Pro) to analyze scraped contexts.

OCR Engine for Receipts

pytesseract, OpenCV, pandas, spaCy

- A custom OCR pipeline utilizing Tesseract and OpenCV to automate the capture of essential financial data (amounts, dates) from receipt imagery for downstream workflows.

EDUCATION

B.Tech in Electronics and Communication Engineering
Sardar Vallabhbhai National Institute of Technology (NIT Surat)

2020 – 2024
Surat, Gujarat

- Built a comprehensive theoretical foundation in Machine Learning, Deep Learning, Computer Vision, and Neural Networks.

12th Standard - Grade: 87%
Aditya Birla Higher Secondary School

Jul 2018 – Apr 2019
Veraval, Gujarat

- Actively participated in various national and school level competitions like Inter ABG Spell Bee competition, Public Speeches and Debates.

10th Standard - Grade: 92.67%
Aditya Birla Higher Secondary School

Completed 2017
Veraval, Gujarat

- Secured District Rank 1 in Board Examinations, graduating in the top 0.18% (99.82 percentile) in the State.

LICENSES & CERTIFICATIONS

- **Professional Cloud Architect (Google Cloud Certified):** Mastery of GCP architecture, practical applications, and hands-on scenario-based cloud solutions.
- **Associate Cloud Engineer (Google Cloud Certified):** Fundamentals of cloud computing, infrastructure architecture, and advanced features on GCP.
- **NLP Specialization (Coursera / DeepLearning.AI):** Probabilistic Models, Classification, Vector Spaces, and Sequence Models using Python.
- **Machine Learning Specialization (Coursera / Stanford):** Comprehensive techniques including TensorFlow, Neural Networks, and contemporary ML algorithms.
